APPLICATION NO.	FILING DATE	FIRST NAMED INVENTOR	ATTORNEY DOCKET NO.	CONFIRMATION NO.
10/064,620	07/31/2002	Sudipta Mukhopadhyay	RD-29161	8845
6147	7590	10/05/2005	EXAMINER	
GENERAL ELECTRIC COMPANY GLOBAL RESEARCH PATENT DOCKET RM. BLDG. K1-4A59 NISKAYUNA, NY 12309			HUNG, YUBIN	
			ART UNIT	PAPER NUMBER
			2625	

DATE MAILED: 10/05/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No. 10/064,620	Applicant(s) MUKHOPADHYAY ET AL.	
	Examiner Yubin Hung	Art Unit 2625	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-31 is/are pending in the application.
 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-31 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 31 July 2002 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:
 - Claim 30, lines 1-2: consider rewrite the two lines to read "A machine readable medium storing computer program code for performing the steps of:"
(Otherwise any computer readable medium can read on the claim.) [Note: For examination purpose the suggested change is how the claim will be interpreted.]

Appropriate correction is required.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
3. Claims 1-8, 10, 12-14, 23-26, 28, 30 and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ransford et al. (EP 479,563 A2) and Scorse et al. (US 5,128,776).
4. Regarding claim 1, and similarly claims 12, 24, 30 and 31, Ransford discloses

Art Unit: 2625

- selecting a portion of an image (in a span of interest) obtained from an acquired imaging sequence; applying lossless compression to the portion of the image and obtaining a compressed image (sequence); applying decompression to the compressed image and obtaining therefrom an analytically relevant image (sequence)
[Fig. 2, refs. 16, 18, 36-50; Col. 11, lines 8-28; Col. 14, line 56- Col. 15, line 15; Col. 15, lines 54-58. Note that it is well known to one of ordinary skill in the art that conventional compression algorithms include both lossy and lossless]

Ransford does not expressly disclose that the image is from a span of interest and that compressed/decompressed image sequences are generated.

However, Scorse suggests compressing a set of images (i.e., a span of interest) to obtain a compressed image sequence. [Fig. 1, ref. 14, 34; Fig. 2, block labeled "Select Image(s) to Xmit."]

Ransford and Scorse are combinable because they are from the same field of endeavor of image compression/decompression.

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify Ransford with the teaching of Scorse by applying the compression/decompression method to a span of images. The motivation would have been because typically multiple X-ray images of a patient is taken and therefore are transmitted [Ransford: Col. 16, lines 1-7] together (perhaps only a subset) to a recipient.

Therefore, it would have been obvious to combine Scorse with Ransford to obtain the invention as specified in claim 1.

Art Unit: 2625

5. Regarding claims 2-8 and 10, and similarly claims 25, 26 and 28, the combined invention of Ransford (R) and Scorse (S) further discloses

- (claims 2 & 26) wherein the portion of the image is a plurality of frames in a span of interest
[S: Fig. 2, block labeled "Select Image(s) to Xmit"]
- (claims 3 & 25) wherein the portion is at least one frame in a span of interest
[S: Col. 4, line 17]
- (claim 4) archiving the analytically relevant image sequence
[S: Fig. 1, ref. 34, 38; Col. 4, lines 20-22]
- (claim 5) wherein selecting the portion in the span of interest comprises having a user select option for selecting the portion of image
[R: Fig. 2, ref. 16; Col. 11, lines 8-28. Also S: Fig. 1, ref. 18; Col. 4, lines 35-37]
- (claim 6) wherein the user select option comprises segmenting an identifiable anatomy of a patient
[R: Col. 11, lines 28-32]
- (claim 7) wherein the user select option comprises manually marking frames of interest
[S: Fig. 1, ref. 18; Col. 4, lines 35-37]
- (claim 8) wherein the user select option comprises sketch-gripping an image boundary
[R: Col. 11, lines 28-32]
- (claims 10 & 28) wherein selecting the portion of the image in the span of interest comprises selecting the portion of image in a time sequence
[S: Fig. 2, block labeled "Select Image(s) to Xmit," (time sequence)]

6. Regarding claim 13, Ransford further discloses

- wherein the imaging device is a medical imaging device selected from a magnetic resonance imaging system, a computed tomography system, an x ray system, an x ray angiogram system and an ultrasound system
[Col. 11, lines 28-32]

7. Claim 14 is similarly analyzed and rejected per the analyses of claims 12 & 13 above.

Art Unit: 2625

8. Claim 23 is similarly analyzed and rejected as per the analysis of claim 1 and additionally the fact the lossy compression methods are well-known conventional compression methods. [For example, as admitted in paragraph 0002 of the application.]

9. Claims 9, 11, 17-18, 27 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ransford et al. (EP 479,563 A2) and Scorse et al. (US 5,128,776) as applied to claims 1-8, 10, 12-14, 23-26, 28, 30 and 31 above, and further in view of Chui et al. (US 5,841,473).

10. Regarding claim 17, the combined invention of Ransford and Scorse discloses

- selecting a plurality of frames of interest (obtained from an MRI device); applying lossless compression to the plurality of frames of interest and obtaining therefrom a compressed image sequence; applying decompression to the compressed image sequence and obtaining therefrom an analytically relevant image sequence
[Per the analysis of claim 1]

The combined invention of Ransford and Scorse does not expressly disclose that the frames are obtained from an MRI device.

However, Chui discloses compressing MRI image sequences [Col. 6, lines 36-44].

The combined invention of Ransford and Scorse is combinable with Chui since they have aspects that are from the same field of endeavor of image compression.

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify the combined invention of Ransford and Scorse with the teaching of Chui by compressing MRI image sequences. The motivation would have been because such images are frequently acquired in medical procedures and the reduction of their size (by compression) can save the storage cost.

Therefore, it would have been obvious to combine Chui with Ransford and Scorse to obtain the invention as specified in claim 17.

11. Regarding claims 9, 11 and similarly claims 27 and 29, note that the combined invention of Ransford and Scorse discloses all limitations of their parent, claims 1 and 24. In addition, the MRI image sequence disclosed in Chui [Col. 6, lines 36-44] is a space sequence and, since each image is taken at a different time, is by definition also a time sequence. Further, Scorse discloses selecting frames from a time sequence [Fig. 2, block labeled "Select Image(s) to Xmit"].

12. Regarding claim 18, note that the MRI image sequence disclosed in Chui is a space sequence. In addition, per the analysis of claim 7, Scorse discloses manual selection of the frames of interest.

Art Unit: 2625

13. Claims 15 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ransford et al. (EP 479,563 A2) and Scorse et al. (US 5,128,776) as applied to claims 1-8, 10, 12-14, 23-26, 28, 30 and 31 above, and further in view of Flower et al. (US 6,351,663).

14. Regarding claim 15, Ransford and Scorse disclose

- selecting a plurality of frames of interest (obtained from the x-ray angiogram); applying lossless compression to the plurality of frames of interest and obtaining therefrom a compressed image sequence; applying decompression to the compressed image sequence and obtaining therefrom an analytically relevant image sequence
[Per the analysis of claim 1]

Ransford and Scorse do not expressly disclose that the frames are obtained from an x-ray angiogram and that selecting the plurality of frames of interest comprises selecting at least two time instances and capturing the frames of interest between the two time instances.

However, Flower discloses capturing x-ray angiograms (i.e., image frames) and comparing a series of angiograms over a time period (i.e., between two time instances) for diagnostic purpose [Col. 1, lines 34-60].

The combined invention of Ransford and Scorse is combinable with Flower since they have aspects that are from the same field of endeavor of image acquisition.

Art Unit: 2625

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify the combined invention of Ransford and Scorse with the teaching of Flower by using x-ray angiograms over a time period (for diagnostic purpose). The motivation would have been because such images are frequently acquired in medical procedures and the reduction of the size (by compression) of the subset of those images (useful for diagnostic purpose) can save the storage cost.

Therefore, it would have been obvious to combine Flower with Ransford and Scorse to obtain the invention as specified in claim 15.

15. Regarding claim 16, it would have been obvious to one of ordinary skill in the art at the time of the invention to select one time instance when a dye appears and a second time instance when the dye disappears since only images captured during the presence of the dye are useful (as column 1, lines 44-48 of Flower clearly suggests).

16. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ransford et al. (EP 479,563 A2), Scorse et al. (US 5,128,776) and Chui et al. (US 5,841,473) as applied to claims 9, 11, 17, 18, 27 and 29 above, and further in view of Reinsch (US 5,134,661).

17. Regarding claim 19, the combined invention of Ransford, Scorse and Chui discloses all limitations of its parent, claim 17.

The combined invention of Ransford, Scorse and Chui does not expressly disclose that the frames of interest in a space sequence are automatically selected using edge detection.

However, Reinsch suggests using edge detection to select areas of interest. [Abstract: lines 1-9.]

The combined invention of Ransford, Scorse and Chui is combinable with Reinsch since they have aspects that are from the same field of endeavor of image processing.

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify the combined invention of Ransford, Scorse and Chui with the teaching of Reinsch by using edge detection to select areas of interest. The motivation would have been because edge detection produces edge points that can be processed to obtain the contours of regions of interest.

Therefore, it would have been obvious to combine Reinsch with Ransford, Scorse and Chui to obtain the invention as specified in claim 19.

Art Unit: 2625

18. Claims 20-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ransford et al. (EP 479,563 A2) and Scorse et al. (US 5,128,776) as applied to claims 1-8, 10, 12-14, 23-26, 28, 30 and 31 above, and further in view of Koo et al. (US 5,846,203).

19. Regarding claim 20, Ransford and Scorse disclose

- selecting at least one frame of interest (obtained from the ultrasound device); applying lossless compression to the to the least one frame of interest and obtaining a compressed image sequence; applying decompression to the compressed image sequence and obtaining therefrom an analytically relevant image sequence
[Per the analysis of claim 1]

Ransford and Scorse do not expressly disclose that the frame of interest is acquired by an ultrasound device.

However, Koo suggests using an ultrasound device. [Figs. 1 & 2A; Col. 4, lines 11-15.]

The combined invention of Ransford and Scorse is combinable with Koo since they have aspects that are from the same field of endeavor of medical image processing (specifically, X-ray and ultrasound images).

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify the combined invention of Ransford and Scorse with the teaching of Koo by processing ultrasound images. The motivation would have been because ultrasound is

Art Unit: 2625

increasingly used as a noninvasive method for examining the interior body matter of a patient.

Therefore, it would have been obvious to combine Koo with Ransford and Scorse to obtain the invention as specified in claim 20.

20. Regarding claims 21 and 22, Koo further discloses that the ultrasound images of tissues are typically fan-shaped [Col. 4, lines 11-15]; in addition, Ransford [column 11, lines 12-21] discloses

- (claim 21) wherein selecting the at least one frame of interest comprises selecting a fan shaped image using automatic means, or
- (claim 22) wherein selecting the at least one frame of interest comprises selecting a fan shaped image using manual means

Conclusion and Contact Information

21. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- McGary (US 5,521,634) – discloses a method for automatic detection and losslessly compression of targets for transmission
- Yang et al. (US 5,926,611) – discloses a method for losslessly and lossily compressing portions of frames
- Krause et al. (US Pub. No. 2003/0123538A1) – discloses a method for losslessly compressing a video sequence

Art Unit: 2625

- Zanelli (US 6,515,657) – discloses an ultrasonic imager that superimposes ultrasonic images over x-ray angiograms to minimize patients' exposure to x-rays and contrasting dye

22. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Yubin Hung whose telephone number is (571) 272-7451. The examiner can normally be reached on 7:30 - 4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bhavesh Mehta can be reached on (571) 272-7453. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
